

AERONAUTICS DIVISION
PROGRESS REPORT
1992-1993

ARIZONA DEPARTMENT OF TRANSPORTATION

Mission Statement

The mission of the Division of Aeronautics is to encourage and advance the safe and orderly development of aviation in the State.

The Purpose of the Arizona Aeronautics Division is to:

PROVIDE the citizens of Arizona a safe, balanced and integrated statewide aviation system to meet present and future needs.

REPRESENT the state of Arizona in planning, developing, maintaining and operating facilities for the efficient movement of people and goods by air throughout the state.

ADVOCATE aviation transportation policies consistent with the overall goals of the state; to enhance the sociological welfare; preserve natural resources and conserve available funding.

WORK cooperatively with all entities - public and private - to develop the means for multimodal mobility that will meet community needs as expressed through local planning, land use, patterns of commerce and public dialogue.

STRIVE to create and maintain a local state and federal climate that will make action programs and adequate funding available to achieve a level of aviation transportation capacity and quality necessary for Arizona's continued progress.

RESPOND to the needs of the public, including their need to know, understand and discuss the aviation transportation issues and developments of the day - and to be continually mindful of the tremendous importance of the mission the department has been given as a public trust.

ATTRACT the vital human resources required and reward performance excellence in order to bring the highest degree of professional and technical expertise to the aviation challenges of this state, supported by a meaningful affirmative action program which offers equal self-development opportunities for all.

IMPROVE and maintain internal systems, controls, and support services that can assure maximum productivity while using time, manpower, equipment and facilities at optimum efficiency.

ENCOURAGE innovative thinking and action directed toward management decisions, policy implementation, systems application and design, research, planning and aviation safety efforts.

Arizona Department of Transportation Aeronautics Division

The Aeronautics Division has embarked on the Total Quality Management (TQM) journey under the recently started Arizona Department of Transportation (ADOT) program entitled the Quality and Productivity Initiative (QPI). The Aeronautics Quality Improvement Council (AQIC) was created with a mission to "plan, implement and monitor the Aeronautics Division's Quality and Productivity Initiative in support of ADOT's Guiding Vision." This council oversees the QPI process within the Division.

Several teams have been created to improve customer satisfaction, streamline internal procedures, increase employee morale and to create an organization dedicated to continuous improvement and excellence. The new ad hoc teams have both employee and management leadership and draw their membership from all sections of the Division.

A number of areas in which our service can be improved and/or our processes can be streamlined have been identified and are being reviewed with an eye to the most effective means of improvement and implementation. Some examples of effective improvements being implemented took place at the Grand Canyon National Park Airport when they reorganized their operational inventory and identified "Just-In-Time" suppliers to reduce their maintained inventory.

As the teams become more efficient with this management process of problem identification and solution, we hope to realize significant savings within the Division.

HISTORY

The history of the Arizona Department of Transportation Aeronautics Division began with the creation of the Arizona Aviation Authority in March of 1950. The Authority originally consisted of an unpaid board of five members serving three year terms. The primary purpose of the board was to advise the Governor and the legislature on aviation matters. In May of 1955, a director was appointed. The Authority started monthly publication of a newsletter in 1956, and an airmarking program to aid in cross-country navigation was initiated in 1958. In 1959, the

Authority began to assist communities in developing airfields. In 1962, the legislature created the Arizona Department of Aeronautics with a seven member board, and appropriated funds to assist in construction of a Grand Canyon National Park Airport. Construction began in 1963, and the airport officially opened two years later.

In 1974, the Departments of Aeronautics, Highways, and Motor Vehicles were combined to form the present-day Arizona Department of Transportation.

1987 - 1988 *Jack Christopherson*

1988 - *Gary Adams*

AUTHORITY AND RESPONSIBILITY

The Arizona Department of Transportation is composed of five divisions; Aeronautics, Highways, Transportation Planning, Motor Vehicles and Administrative Services. The Aeronautics Division is charged by State law to: encourage and advance the safe and orderly development of aviation in the State; assemble and distribute, to the public, information relating to aviation; represent the State on issues of routing and rate schedules concerning commercial airline traffic; accept federal and other monies for airport development or air navigation facilities; ensure that the Grand Canyon National Park Airport is operated and maintained; license aircraft

dealers; register non-airline aircraft within the State and make recommendations on legislative and policy issues. For statutory references, see Arizona Revised Statutes, Title 28, Chapter 12.

The Aeronautics Division is organized along functional lines of responsibility. In June, 1990, the Division realigned certain functions, with planning and air service coming under the Airport Development Program Administrator, and aviation safety and education joining administration and aviation revenue under the Aviation Program Administrator. The organizational structure of the Division is shown in the chart below.

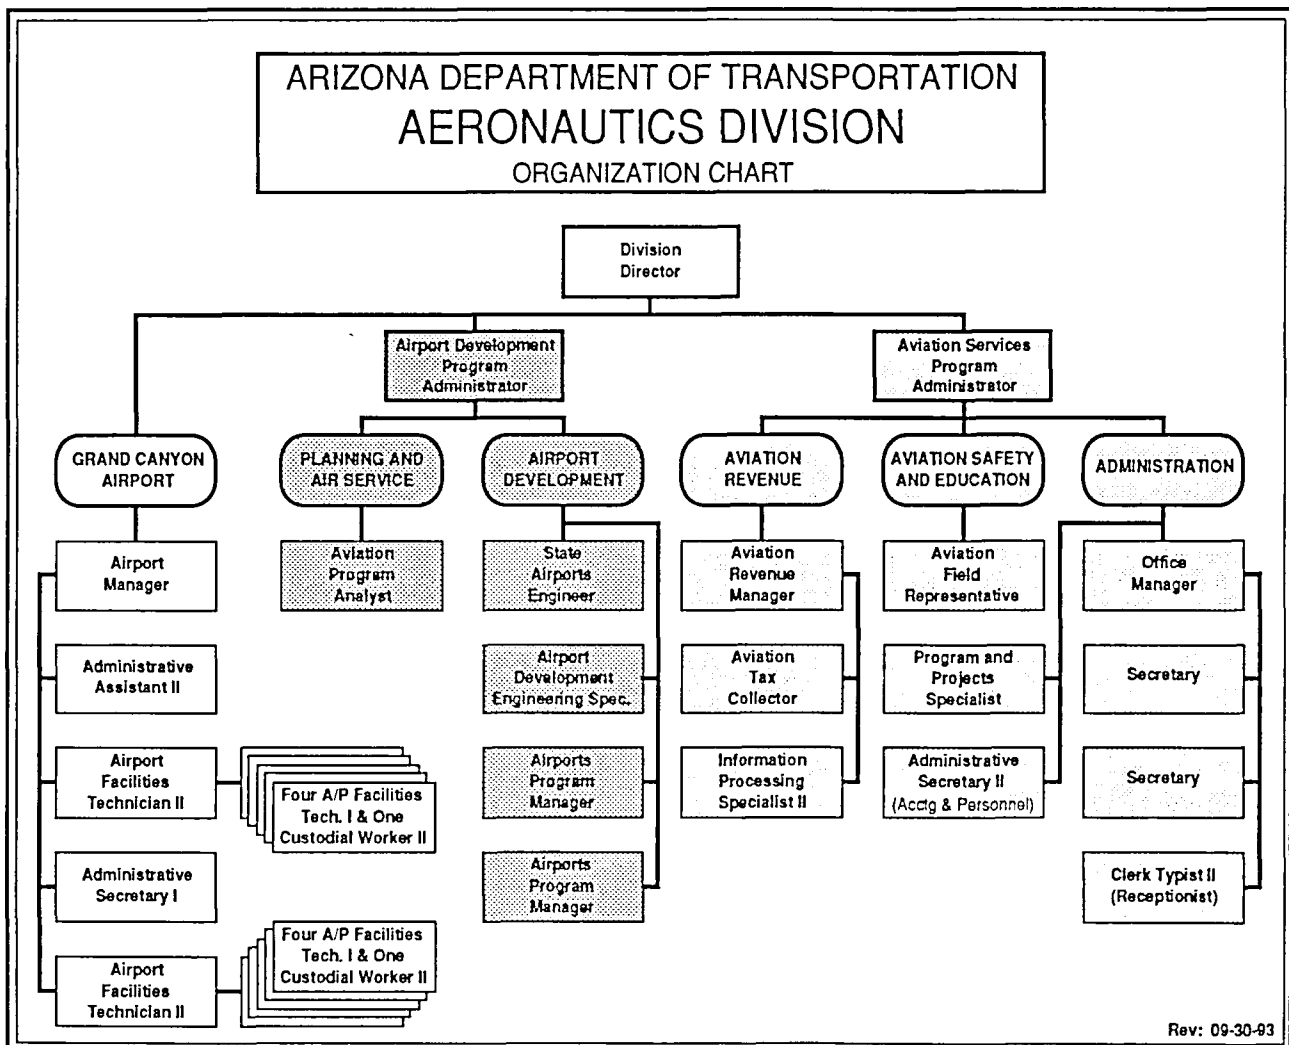

Figure 1

ARIZONA AIRPORT SYSTEM

Arizona's State Airport System directly connects the State's communities, and provides an essential link with the national systems of airspace and airports. It is considered desirable to provide the general public with no more than a thirty minute driving time to a public use airport facility. In Arizona, there are 212 airports and 76 heliports registered with the Federal Aviation Administration (FAA). A primary system of 58 airports provides service to 90% of the population. Of the 58 primary system airports, 49 are publicly owned, while 6 are Indian-controlled and 3 are privately owned.

Primary airports are those airports which have:

- Ten or more based aircraft or 2,000 or more annual operations;
- Scheduled air service by an air carrier or commuter airline on a regular basis; or
- Projections to meet the above criteria within ten years.

Of the 288 facilities, the 76 heliports or helistops currently listed by the FAA in Arizona are private-restricted facilities.

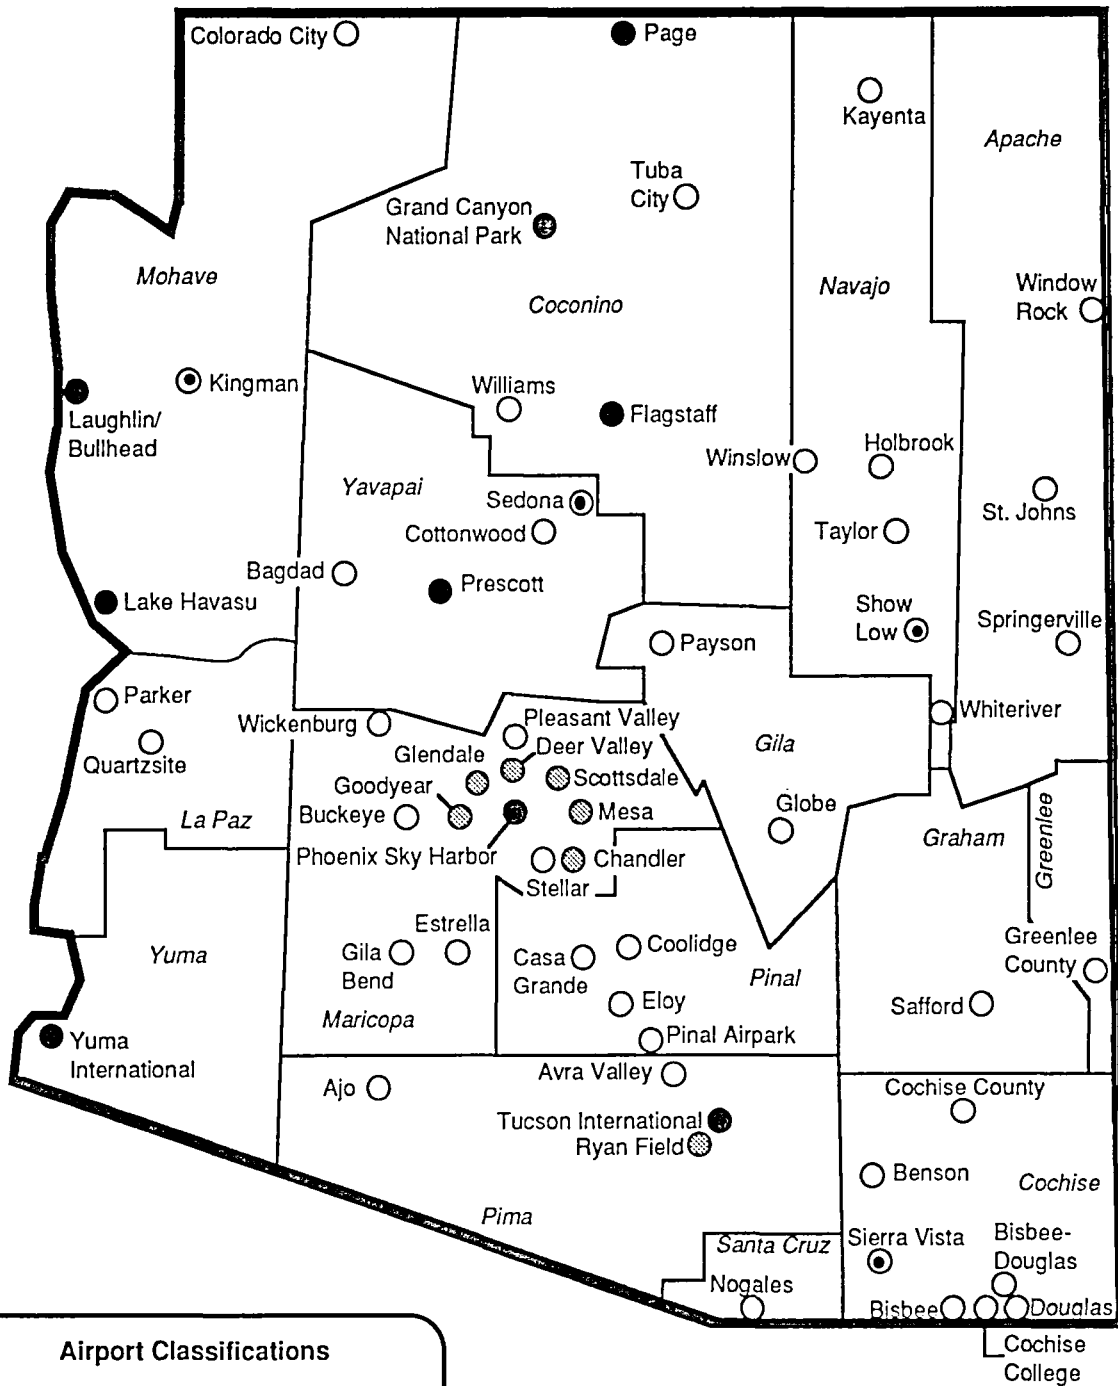

Capital improvements for active airport facilities are financed by a combination of generally available sources: federal funds, state funds and local funds. Federal funds are generated by aviation users and administered back to airports through the Federal Airport Improvement Program. For Federal funding, airports are categorized as shown in table 1.

ARIZONA AIRPORT SYSTEM FACILITIES BY TYPE		
	Primary	Secondary
Primary Commercial Service Airports served by scheduled airlines enplaning 10,000 or more passengers annually.	9	
Non-Primary Commercial Service Airports served by scheduled airlines enplaning 2500 or more passengers annually.	4	
Reliever Airports which relieve congestion at a commercial service airport and provide additional general aviation access to the community.	7	
General Aviation Airports used for general aviation purposes.	38	44
TOTAL SYSTEM AIRPORTS	58	44

AIRPORT DEVELOPMENT

Under the direction of the Airport Development Program Administrator, this section has the following responsibilities:

- 1) Administration of the Five-Year Airport Development Program and reimbursement of sponsor expenses for eligible project items;
- 2) Technical support for airports and airport projects;
- 3) Engineering guidance for and administration of Grand Canyon Airport construction;
- 4) Airport safety data inspections covering selected public airports.

PROGRAMMING

The planning process for the 5-year Airport Development Program begins with an extensive evaluation of needs. These needs are then prioritized among the various airport categories before inclusion in a program consistent with the criteria established by Transportation Board policy. Finally, they are evaluated and matched with anticipated funds to arrive at a financially balanced program that makes optimum use of available aviation dollars.

FUNDING

Airport construction and development in Arizona is accomplished through a cooperative effort involving three levels of government: federal, state and local. Each of these governmental units shares in the financing of airport development projects in the State. The Federal Airport Improvement Program, when viewed in dollars allocated per year, has fluctuated from year to year, but overall has almost tripled in the last decade. This is an indicator of the growth of aviation in Arizona. Figure 6 depicts this growth.

At the local level, funds for airport development may come from several sources. General fund contributions, revenue from general obligation bonds, user taxes and revenues from airport leases and concessions are examples of the primary sources of funding. However, local communities are often unable to keep pace with their airport's needs without increased federal or state assistance.

Currently, the local sponsor provides a matching share of 4.47 percent on federal/state/local projects and ten percent on state/local projects.

The State's Airport Development Program has increased dramatically over the years.

Figure 2

Figure 3

State grant funds awarded have increased from \$1.62 million in FY 1979-1980 to \$15.2 million in FY 1992-1993. This represents growth of over 900%. Figure 3 illustrates some of this growth.

The State's grant award program was supplemented by the loan program in the 1991-1992 and 1992-1993 fiscal years. Loans totaling \$4.6 million were provided for terminal and hangar construction at 10 airports.

AIRPORT PROJECTS COMPLETED

The number of airport projects completed remained relatively constant during the fiscal year periods of 1981-1982 to 1988-1989, as shown in Figure 4, with between 25 and 30 projects completed each year. The sharp increase in both State and Federal funding beginning in FY 1987-1988 has resulted in a significant increase in the number and scope of projects in progress. The number of projects completed jumped to 72 in FY 1992-1993, which reflects this increased funding.

PROJECT ADMINISTRATION

Airport projects funded through the Five-Year Airport Development Program are subjected to technical review and monitoring, from design through the construction and audit processes. During the design phase, the Section assists sponsors in evaluating and interpreting design criteria. Additional assistance is rendered by reviewing and commenting on engineering agreements, plans, specifications, and contract documents for compliance with State funding requirements.

As the project progresses through the construction phase, the Airport Development Section reviews bid tabulations, performs field reviews of work during construction, reviews field and laboratory procedures/test results, and analyzes and approves change orders. At the conclusion of the project, a final inspection is performed. As-built plans and certified quantities are required before final payment is made. Approximately one-third of the projects are audited to ensure compliance with contractual requirements.

Figure 4

TECHNICAL ASSISTANCE

The Airport Development Section provides technical assistance to the Sponsor to assure quality construction, optimize construction costs, streamline administrative procedures through all stages of the project, and assist local officials in the development of their airport facilities in a cost-effective manner.

The Airport Development Section also provides technical support for special aeronautical studies and the development of airport plans. Staff support was provided for the Regional Airport Feasibility Assessment completion and forwarding to the governor for review and action. Local airport sponsors may, at any time, receive technical comment and operational guidance concerning improvements or development of their airports.

The sponsor's administrative burden is being reduced through the assistance provided by the airport development section. Where possible, reporting forms and other documents already required by the Federal Government are also used for State purposes, helping reduce duplication.

AIRPORT SAFETY INSPECTIONS

During the year, the Airport Safety Inspection Team visited more than fifty Arizona airports. The team conducts inspections of public use airfield facilities and conditions for the FAA

Airport Safety Data Program. The objectives of the program are to promote airport safety through contact with airport management; identify and report safety conditions at airports; and make recommendations to correct deficiencies. The program also provides airport information for the FAA airport data base, and for publishers of aeronautical charts and airport guides.

GRAND CANYON AIRPORT ENGINEERING

The Airport Development Section is responsible for engineering and administering construction projects at the State-owned Grand Canyon Airport. All funding, payment and project authorizations are processed by the Airport Development Section. A consulting firm has designed access roads, a heliport, a terminal, automobile parking, and utilities. Construction of site improvements began in May of 1991 and will be completed in September of 1993.

All engineering phases of construction work undertaken at the Grand Canyon Airport are either performed directly by this office, or by engineering consultants under the supervision of the Airport Development Section.

AIR SERVICE AND AVIATION PROGRAMMING/PLANNING

The Aviation Planning Section assisted in developing strategies and programs for the long term orderly development of Arizona's aviation system.

Ongoing monitoring of the aviation system is conducted with the goal of identifying system deficiencies and future demands. To accomplish this goal, the division maintains a continuous planning process for the system. Increments of the continuous planning process include analysis of current aviation activities for the airports of the system, forecasts of future demand on the system and the ability of the system to meet the future needs. The Division has just completed updating the Airport Land Use Compatibility Study. This study looks at the existing land uses surrounding the system airports and identifies non-conforming land uses. The study also inventories the current zoning regulations in the vicinity of the system airports and recommends strengthening the zoning where needed. Other segments of the continuous planning process include a Pavement Management Study to determine the health of the airport pavements. The Aviation Activity Study is conducted biennially to track the system usage and serve as a base for forecasts of future aviation demands. Additionally,

periodic studies are conducted to analyze issues such as Commuter Air Service, Secondary System performance, Economic Impact Studies, Recreational Airport Study and Emerging Airports. The division supports the regional aviation planning activities of Maricopa and Pima Counties and includes the regional studies in the state aviation plan.

The planning section establishes procedures, in conjunction with the Federal Aviation Administration, for airport planning. Airport specific studies include site selection studies, airport master plans, airport noise studies, and environmental assessment studies for proposed airport projects.

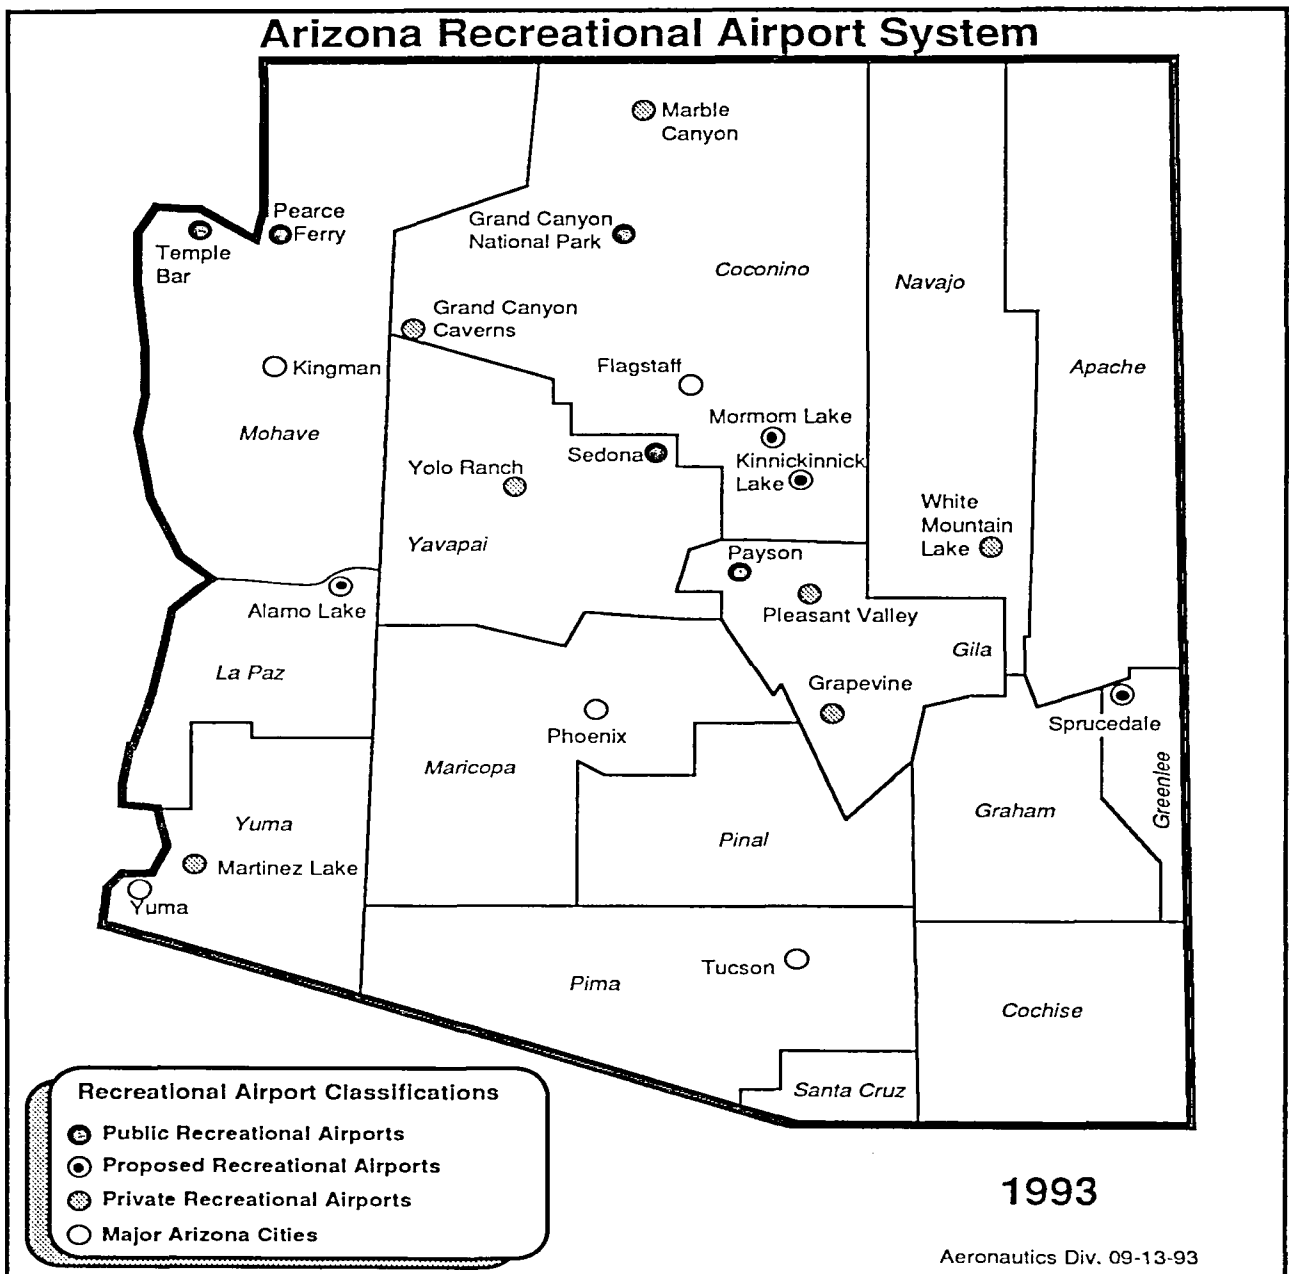

Recent studies that have been completed in aviation planning include: Aviation Needs Study, a legislative mandate on the performance of the State's airport transportation system; an Economic Impact Study on Aviation in Arizona; an Airport/Heliport Land Use compatibility study which provided an inventory of the State's primary airport system and a synopsis of Indian airports. These last two studies, along with a Forecast of Airport Usage and a Study of Commuter Air Service Feasibility, are incorporated into the State Aviation System

Plan (SASP). During the past year, the section participated extensively in the State Aviation Needs Study. Several other studies/programs recently completed include: a complete automation of the SASP data; a regional airport feasibility; and the development of a microcomputer noise model for airport land use planning.

The staff continues to participate in both Maricopa Association of Governments (MAG) and Pima Association of Governments (PAG) Regional Aviation System Plan (RASP) studies to ensure proper dovetailing of findings.

The planning section also coordinates with the Aviation Services Program Administrator for the monitoring of federal and state legislation to determine the impact on aviation in Arizona.

The Arizona Recreational Airport Study has been completed. It identified the prime candidates for implementing fly-in camping opportunities in Arizona. The map below depicts the Arizona Recreational Airport System.

GRAND CANYON NATIONAL PARK AIRPORT

The Aeronautics Division is responsible for the maintenance, operation and improvements of the only active State-owned airport in Arizona. The Airport is located seven miles from the South Rim, and was originally constructed with funds from the Department of Interior, the Federal Aviation Administration and the State of Arizona. The airport first opened in October, 1965. It was completed and formally dedicated in October, 1967.

Today, it is the third most active air carrier airport in the State following Phoenix Sky Harbor and Tucson International. The airport is served by over 40 air taxi and commuter carriers. Annual aircraft operations increased during the year to 176,167 and the total number of passengers for fiscal year 1993-1994 is estimated to be over 1,000,000.

The airport is operated by a staff of fifteen full-time employees of the Aeronautics Division, including the airport manager.

An economic impact study, prepared for ADOT by the Economic Outlook Center of Arizona State University, estimates the impact of Grand Canyon National Park Airport as providing 730 jobs, and total economic activity of \$45 million in Coconino County.

ADMINISTRATION

and personnel services are also provided. This section closely monitors all expenditures from the State Aviation Fund.

The Aviation Services Program Administrator is responsible for coordinating, reviewing, and commenting on all legal and regulatory matters, legislative and rulemaking functions for the Division, as well as the administration of the Grand Canyon National Park Airport, Aviation Revenue, and the Safety and Education programs.

The State Aviation Fund expenditures are approved through an annual budget cycle

The Administrative section is responsible for the day-to-day operation of the Division. The activities of the Division Director and Aviation Services Program Administrator are included under this section. The Administrative section is continually involved with a wide spectrum of aviation issues which range from answering inquiries from the public to involvement in national issues of major significance to the aviation community.

The Division has automated, through a network of personal computers, many of its administrative activities. Work has continued on coordinating the automation of the FAA's 5010 data base and field inspection programs, with Arizona becoming the first State to receive approval from the FAA to electronically supply 5010 information.

Under the direction of the Aviation Services Program Administrator, the Administrative Section is also responsible for budget preparation, accounting and fiscal controls, management, policy and direction. Secretarial and clerical support, records management

by the State Legislature. The Legislature approves an administrative budget with the remaining available funds appropriated in a lump sum for airport construction and development. The Transportation Board, through public hearings and a priority rating system, approves individual airport construction projects as published in the Five-Year Airport and Highway Construction Program. (See Airport Development Section for details.)

The Division is an active member of the National Association of State Aviation Officials (NASAO). Division personnel continually meet with the FAA's management staff on issues affecting Arizona regarding aviation weather, contract tower operations; heliport and airport construction funding, Part 77 obstacle criteria and Federal/State relationships on various aviation matters. The Division Director is co-chairman of the Arizona Airspace Utilization Committee (AAUC). This committee was effective in achieving an unprecedented degree of user input into the final configuration of the Phoenix

Terminal Control Area, implemented on January 11, 1990. The Division, through the NASAO organization, has strengthened the working relationships with the National Air Transport Association, Airport Operators Council International, Aircraft Owners and Pilots Association, and American Association of Airport Executives. The Division Director has also been active in renewal efforts before Congress for such programs as the Federal Airport Improvement Program and the Essential Air Service Program. The Division participates and makes presentations at the fall and spring conferences of the Arizona Airports Association.

Table 3

AVIATION REVENUE

The Arizona State Legislature passed into law a bill which created several new categories of aircraft. This was done in order to simplify the registration process for these specific types of aircraft. This bill also eliminated interest on delinquent aircraft taxes and increased the penalty fee for delinquent registration of aircraft.

As a result of new legislation requiring stored aircraft to pay a fee, total number of registered aircraft has decreased. Many

The Aviation Revenue section is responsible for collection of all general aviation aircraft registration fees and lieu tax in the State; the monitoring, forecasting and assisting in the collection of various other revenues for the State Aviation Fund, and the licensing of aircraft dealers.

The lieu tax is one-half percent of the average fair market value of the aircraft. The Division uses the Aircraft Bluebook Price Digest as its main valuation source on most aircraft. Registration fees and taxes must be paid annually by the last day of February or within sixty days after entry into the State. Aircraft owned by a State licensed Aircraft Dealer in the Dealership name are exempt from the lieu tax if the aircraft is not used commercially and is held for resale only. All Aircraft dealers must post a surety bond in the amount of \$10,000. A cash deposit of \$10,000 may be placed on deposit with the State Treasurer in lieu of a bond. A non-resident may base his aircraft in the State for up to ninety days in a calendar year without registering. No tax can be assessed less than twenty dollars a year except for non-residents subject to the tax.

Several important changes to State aircraft registration law were enacted in April, 1991.

stored aircraft were scrapped and/or deregistered with the FAA, voiding the requirement by the owner to register the aircraft in the state.

The revenues collected are deposited in the State Aviation Fund and can only be used for construction, development, and improvement of publicly owned airports throughout the State.

The aviation revenue section works closely with law enforcement agencies. The Division's registration records are useful in determining

CALENDAR YEAR 1992

AIRCRAFT REGISTERED: 5,258

WARBIRD	17

Table 4

true ownership as well as historical background of an aircraft. The section has developed a reputation nationwide for having the most current ownership information available. Some of the agencies which use the information include the Federal Bureau of Investigation (FBI), Drug Enforcement Administration (DEA), Department of Public Safety (DPS), Internal Revenue Service (IRS), National Narcotics Border Interdiction System (NNBIS), sheriff's offices and local city police departments. The on-line automated records system has proven very beneficial to law enforcement agencies. Through the Arizona Department of Public Safety computers, these agencies now have access to aircraft registration records 24 hours a day. All correspondence and forms are processed with the division's microcomputers.

The aviation revenue sections also works with other federal, state and local governments such as the Federal Aviation Administration (FAA), Department of Revenue, Emergency Medical Services, Arizona Corporation Commission, Industrial Commission of Arizona

and the Department of Economic Security. Whenever possible, we provide information that may help in their investigations.

Registration information is available to consultants, engineering firms, and various planning groups for airports planning as well as forecasting for future development. Aircraft registration information is also provided to airports to assist in identifying aircraft and owners when necessary.

This section closely monitors the State Aviation Fund revenues. The Aviation Fund receives revenue from a variety of sources including:

- a. Flight property taxes paid by scheduled airlines;
- b. Aviation fuel taxes - \$.05 per gallon;
- c. Aircraft lieu tax and registration fees on non-airline aircraft;
- d. Revenues from the operation of Grand Canyon National Park Airport;
- e. Aviation funds on deposit invested by the State Treasurer.

* Calendar Year Data

** Decrease in revenue reflects tax reform legislation cutting tax rate in half.

*** As a result of new legislation requiring stored aircraft to pay a fee, total number of registered aircraft has decreased due to owners having aircraft deregistered with the FAA, voiding the requirement to register with the State.

* As of August 13, 1986 -- AvGas Tax was increased from 0.01¢ per gallon to 0.05¢ per gallon.

** As of August 18, 1987 -- AvGas Refunds were eliminated except for aerial applicators.

*** An additional \$151,541 was collected in fiscal year 1992-1993, however it will be credited to the fiscal year 1993-1994 numbers.

Table 6

AVIATION SAFETY AND EDUCATION

RESPONSIBILITIES

The Aviation Safety and Education Section is responsible for the dissemination of aviation information, air safety, aerospace education, and monitoring aviation regulations. Planning, organizing, and conducting aviation related seminars are also included in this section.

INFORMATION EXCHANGE

The Section monitors regulatory proceeding, reviews press releases, monthly magazines and newsletters to stay in touch with aviation safety, regulatory, and industry developments. Many of these periodicals are organized and retained in an aviation reference library. The section handles calls, letters, and other contacts from the general public and aviation interests each year. Information is provided on the spot, research is initiated, and referrals are made to other sources having additional specific expertise.

ACTIVITIES

Safety and education efforts during 1992-93 concentrated on continuing the safety seminar program; assisting in the FAA 5010 Airport Master Record inspection program; assisting with the State Aviation System Plan; and

active participation with various aviation related organizations. Assigned personnel also act as a resource for other sections within the Aeronautics Division. Data collection, planning, and analysis is provided on special projects. The Aviation Field Representative is designated as Division pilot, to arrange and conduct air transportation when required, as well as keeping regulatory and navigation data current and available. FAA airspace studies are researched and comments provided. A library of videotapes is maintained and is being expanded to meet aviation education needs.

AVIATION PILOT SEMINARS

Last year the Division started a Pilot Seminars program. These Seminars are scheduled quarterly in various locations throughout the State. They provide continuing education for pilots, answer questions from the audience, and encourage maintenance of pilot proficiency and responsibility.

The section is also a member of the Aviation Safety Advisory Group.

AVIATION EDUCATION

National Aviation Education Week is planned each year for the first full week in October to educate children and the general public, and to introduce them to the varied elements of aviation. The Aviation Services Program Administrator chairs the Arizona Aviation Education Week Committee, which encourages and coordinates activities throughout the state during the week. The Committee has representatives from aviation, education, government, industry, and media organizations to provide a broad orientation and outreach.

International Aviation Art Contest is a contest designed to interest school age children in the many facets of aviation. The contest is sponsored in Arizona by the Aeronautics Division in coordination with NASAO on the national level.

PUBLICATIONS

Aviation is the official publication of the Arizona Department of Transportation, Aeronautics Division and is distributed

periodically to Arizona aircraft owners, aviation organizations, and others by request. The purpose of this publication is to disseminate information on division activities emphasizing airport development projects, news from and events of local aviation organizations, safety-oriented features, regulatory and procedural updates, features of interest to Arizona aviators, and national news affecting aviation.

The Annual Progress Report is a composite of the activities of the Aeronautics Division over the preceding fiscal year.

Helicopter Facts is a booklet providing basic information about helicopters and how they fly. It is designed as an education tool for use during helicopter displays, and is provided on request to individuals or groups.

The Arizona Aeronautical Chart was funded by the legislature and published in 1991. The chart provides pilots with the ability to plan trips within the State of Arizona, using the State's concise and comprehensive chart.

Desert Survival Guide is a pamphlet outlining various desert survival principles, including specific techniques in survival situations.

Bald Eagle Nesting Sites is produced in partnership with the Arizona Department of Game and Fish in an effort to provide pilots with a detailed layout of eco-sensitive nesting sites throughout the State.

Division Brochure, published as a quick-reference guide, outlines the Division's scope, as well as lists the services available to the commercial and general aviation communities.

Arizona Aviation Facts is a one page reference of the number of airports, pilots, and aircraft in Arizona that is prepared to provide general information about aviation in Arizona.
